

- Notes

1. Date:

Import declaration data retrieved between 2020-01-01 and 2020-12-31 inclusive.

2. Commodity:

Retrieved import declaration data under Harmonized System (HS) Codes for:

Reptiles

Amphibians

Birds

Mammals

note that numbers reported for 'research' and 'biological supply' not accurate, some imports may have been reported as numbers of packages for extensive list of amphibian species imported into Canada, see *Alytes* , 2012, v29 (1-4): 103-115

domestic fowl, partridges, pheasants, pigeons, imported for farms, not included

primates reported

marine mammals no report; no imports recorded

Camelidae all alpacas imported from U.S. for farms; report not included

rabbits all domestic for imported for farms and research; report not included

mink no report ; no imports recorded

mammals other than primates, mink, rabbits, and camelids report removed dogs and most cats

3. Notes on Fields:

Taxonomic Name field shows taxonomic names declared by importers on electronic import declarations; left blank when no taxonomic names provided.

Common Name (product description) field shows common names declared by importers on electronic import declarations; left blank when no common names provided.

Country of Origin and Place of Export: Country codes declared on import declarations (electronic and paper); for list of country codes and corresponding countries, see: Appendix H, List 2: <https://www.cbsa-asfc.gc.ca/publications/dm-md/d17/d17-1-10-eng.html#a13>

Animal Source: (captive reared, wild, etc.) unable to ascertain for all import declarations

Purpose of Import: inferred from importers/exporters on declarations.

4. General Notes:

Taxonomic and common names for those species declared on paper import declarations are not accessible, hence the frequent 'blanks' under the Taxonomic Name field and the general categories, based on HS code, in the Common Name field (e.g., Amphibians, Reptiles, Primates, Birds of Prey, Pet or Song Birds).

The number of individuals imported as declared on paper import declarations are derived from electronic records based on Harmonized System (HS) codes and reported for each unique combination of country of origin/place of export.

Because the paper import declarations are not accessible, the accuracy of the data is not guaranteed, e.g., amphibians and invertebrates are often reported under HS codes for reptiles.
